

Alternative Therapies To Treat Painful Conditions

Ask If One Of These
State-Of-The-Art Procedures
Could Be Right For You

Not All Regenerative Medicine Injections Are The Same

Experience

Our board-certified physicians have years of experience in minimally-invasive procedures with additional training in regenerative injection techniques. The entire staff is dedicated to providing you with the best possible experience. Schedule an appointment with our physicians to determine if one of these cutting-edge procedures could be right for you.

Technology

All procedures are performed under the guidance of ultrasound or a fluoroscopy unit to maximize results. We've incorporated the latest innovations of APEX Biologix, which, through their equipment and supplies, help us obtain some of the best concentrations of PRP in the industry.

Platelet Rich Plasma Injections

Regenerative Therapies

About Regenerative Therapies

Regenerative therapies are a spectrum of cutting-edge therapeutic techniques that have shown to help treat the cause of a painful condition rather than masking the symptom. Studies have shown regenerative therapies stimulate and accelerate your own body's natural abilities. One of the most effective Regenerative therapies is **Platelet Rich Plasma (PRP) Injections**.

Platelet Rich Plasma

Platelet Rich Plasma (PRP) therapy utilizes platelets taken from the patient's own blood.

Platelets

Platelets normally circulate within the blood stream and are responsible for blood clotting and initiating a healing response in an injury. Many injuries do not heal adequately and can lead to chronic pain and loss of function of the injured area. Platelet Rich Plasma (PRP) therapy allows us to harvest the patient's own platelets and re-inject those concentrated platelets into the site of the injury to initiate the body's abilities and improvement of function. This is typically done under image guidance such as ultrasound and/or fluoroscopy.

The Result

PRP has shown to be successful in not only relieving pain, but also in jump-starting the body's natural processes.

Treatments

Injuries and conditions commonly treated by PRP Injections include:

- **Back & Neck Pain**
- **Golfer's Elbow**
- **Osteoarthritis of the Knee, Hip & Shoulder**
- **Tennis Elbow**
- **Joint Injuries**
- **Ligament, Cartilage, & Tendon Injuries**

The Injection Procedure

Platelet Rich Plasma therapy injections are done at our office and take about an hour. Patients return home the same day and are often able to work the following day.
